Comprehensive Neuropsychological Assessment

Summary of Services Provided

A typical neuropsychological assessment takes approximately 4 hours, and includes an interview, assessment, and subsequent formal report preparation. Telephone interview(s) and clinical file review may also be required. On occasion, it may be necessary to perform additional consultations, either by phone or face-to-face, and/or to prepare an extended neuropsychology report; case conference(s) with the referrer and / or members of your health care team may also be required. A subsequent consultation for feedback and/or psychoeducation can also be provided.

You will be asked to complete a number of different paper and pencil tasks, looking at different aspects of your cognitive ability. Please make sure to bring your reading glasses if required and advise the clinic if you experience a seizure event in the preceding 24hrs.
